			HAZARDOUS FUELS REDUCTION: “Fuel Reduction” is defined as the manipulation or removal of fuels, including combustion, to reduce the likelihood of ignition and/or to lessen potential damage and resistance to control. Incorporated within this are treatments to protect, maintain, and restore land health and desired fire cycles. “Hazard Reduction” is defined as any treatment of a hazard that reduces the threat of ignition and fire intensity or rate of spread.	
DD	H1	2823	1. Number of projects planned in wildland areas.	<p>A “project” is an individual plan (1 plan = 1 project). These projects are for the benefit of resource management and are located outside of the Wildland Urban Interface (WUI).</p> <p>Unit of Measure: Number of projects.</p>
JM	H2	2823	2. Number of wildland acres treated.	<p>A “treatment specification” (“treatment” for short) is an individual activity such as a prescribed fire, chemical treatments, or mechanical manipulation. The intent is to improve or maintain a desired condition class. These include treatments completed through award of local contracts or by agency workforce. These treatments are for the benefit of resource management and are located outside of the Wildland Urban Interface (WUI).</p> <p>Several different treatments may occur on a single acre of land. For purposes of FY2001 Work Load Measure reporting, the method used for calculating these acres must be consistent with the acres reported as targets in the Financial Action Plan of FY2001. The Financial Action Plan counts treatment acres and is not limited to project acres.</p> <p>Unit of Measure: Number of acres.</p>
DD	H3	2824	3. Number of projects planned in Wildland Urban Interface (WUI) areas.	<p>Wildland Urban Interface (WUI) areas are areas where humans and their development meet or intermix with undeveloped wild areas that may be vulnerable to forest or rangeland fires. The intent is to treat priority communities at risk. A “project” is an individual plan (1 plan = 1 project).</p> <p>Unit of Measure: Number of projects.</p>

JW	H4	2824	4. Number of WUI acres treated.	<p>Wildland Urban Interface (WUI) areas are areas where humans and their development meet or intermix with undeveloped wild areas that may be vulnerable to forest or rangeland fires. A “treatment specification” (“treatment” for short) is an individual activity such as a seeding, weed spraying, or reforestation efforts to name a few. These acres include treatments completed through award of local contracts or by agency workforce.</p> <p>This is a measure of the total acres of hazardous fuels treatments being undertaken as part of a project within a WUI and is associated with at-risk communities. Several different treatments may occur on a single acre of land. For purposes of FY2001 Work Load Measure reporting, the method used for calculating these acres must be consistent with the acres reported as targets in the Financial Action Plan of FY2001. The Financial Action Plan counts treatment acres and is not limited to project acres.</p> <p>Unit of Measure: Number of acres.</p>
	H5	2821	5. Number of wildland fires managed to meet resource objectives.	<p>These are wildland fires, regardless of ignition source, which are managed to accomplish specific pre-stated resource management objectives in predefined geographic areas outlined in the Fire Management Plan. Management of these fires follow the interagency "Implementation Procedures Reference Guide".</p> <p>Unit of Measure: Number of fires.</p>
JM	H6	2821	6. Number of acres on which wildland fire is managed to meet resource objectives.	<p>This is a tabulation of acres which are managed to accomplish specific pre-stated resource management objectives in predefined geographic areas outlined in the Fire Management Plan. Management of these fires follow the interagency "Implementation Procedures Reference Guide".</p> <p>Unit of Measure: Number of acres.</p>

NONE KNOWN	H7	2823 2824	7. Number of local contracts and task orders awarded to implement hazardous fuel reduction.	<p>PL106-291 authorizes contracting officers to obtain the maximum competition practicable using local contractors “To enhance local and small business employment opportunities for rural communities.” The meet the local procurement requirements, offices will use the 11 existing Geographical Area Coordination Centers (GACCs) and their newly delineated sub-geographic areas to define what is local. “Local” may include those contractors employing 50% or more local labor, or a contractor whose headquarters are located within the same newly delineated sub-geographic area as the project. Local offices (i.e., agencies, field offices, tribes, districts, parks, and refuges) will be responsible for implementing and tracking contracts.</p> <p>Unit of Measure: Number of contracts/task orders.</p>
MT	H8	2823 2824 2822	8. Projects in monitoring status.	<p>Monitoring is defined as measuring changes over time and is addressed in respective activity plans such as Fire Management Plans or Burned Area Emergency Stabilization and Rehabilitation Plans. An individual project may be monitored several times over several years in accordance with the respective activity plan. This Workload Measure is an annual count of projects currently being monitored. A “project” is defined as an individual plan for each WUI/wildland hazardous fuels treatment, or for each burned area emergency stabilization and rehabilitation activity.</p> <p>Unit of Measure: Number of projects.</p>
			COMMUNITY AND RURAL FIRE ASSISTANCE: Community assistance programs focus on building community capacity to develop and implement citizen-driven solutions that will lessen local vulnerability to risks associated with wildland fires.	
AF AL	C1	2860 2824	1. Number of Community Assistance	The objectives are to promote community assistance programs that may be use to develop local capability including; planning, mitigation, and

			agreements/partnerships with volunteer/non-profit organizations as well as state, local, and tribal governments.	<p>homeowner education; To plan and implement hazardous fuels reduction activities and training and monitoring associated with such hazardous fuels reduction activities, on federal land, or on adjacent non-federal land for activities that benefit resources on federal land; To expand the existing mitigation and fuels management programs to reduce the risks to communities and natural resources in high-risk areas; To enhance local and small business employment opportunities for rural communities; Local offices (i.e., agencies, field offices, tribes, districts, parks, and refuges) will be responsible for implementing and tracking agreements.</p> <p>Units of Measure: Number of signed community assistance agreements.</p>
AF AL	C2	2860 2824	2. Number of activities which contribute to the community assistance effort	<p>These activities include risk assessments, plans, and mitigation activities other than fuels treatments that reduce community risk.</p> <p>Units of Measure: Number of activities.</p>
AF AL	C3	2860 2824	3. Number of fire education and prevention programs presented.	<p>Programs include FIREWISE, Living With Fire and other related outreach activities. Larger programs may have individual segments which may take several weeks to present. Each major segment may be counted as a “program presented.”</p> <p>Unit of Measure: Number of programs presented.</p>
AF	C4	2860	4. Number of rural/volunteer fire departments awarded funds for training, equipment or prevention activities.	<p>The USDA Forest Service Volunteer Fire Assistance program provides technical and financial assistance to volunteer fire departments in rural communities. The DOI Rural Fire Assistance program is intended to enhance the fire protection capabilities of rural fire districts by assisting with training, equipment purchase, and prevention activities.</p> <p>Unit of Measure: Number of fire departments.</p>
